**The Hat Industry of Luton and Its Buildings** Aug 22 2021 Although perhaps best known today as the home of Vauxhall Motors, Luton's industrial roots run much deeper. Long before it became associated with motor cars Luton was the centre of ladies' hat production in this country - a success founded upon the earlier regional industry of straw-plaiting. Many surrounding towns and villages fed into the industry and helped to make the region globally renowned. At its peak in the 1930s, the region was producing as many as 70 million hats in a single year; however, it entered a rapid decline following the Second World War from which it never recovered. This has left Luton, Dunstable and a number of other local towns with a challenging inheritance of neglected and decaying fragments of a once vital industry. This book is intended to be an introduction and guide to the area's historical depth and to its distinctive and varied character, seeking to explain the development of the region as the centre of the hatting industry in the south and exploring the lives of the people working there during the nineteenth and early twentieth centuries. The historic links between the surviving building stock and the hatting industry are assessed and the book highlights the significance of the surviving fabric and the potential of the historic environment within future conservation and regeneration plans.

**Machine Habitus** Oct 24 2021 We commonly think of society as made of and by humans, but with the proliferation of machine learning and AI technologies, this is clearly no longer the case. Billions of automated systems tacitly contribute to the social construction of reality by drawing algorithmic distinctions between the visible and the invisible, the relevant and the irrelevant, the likely and the unlikely – on and beyond platforms. Drawing on the work of Pierre Bourdieu, this book develops an original sociology of algorithms as social agents, actively participating in social life. Through a wide range of examples, Massimo Airoidi shows how society shapes algorithmic code, and how this culture in the code guides the practical behaviour of the code in the culture, shaping society in turn. The 'machine habitus' is the generative mechanism at work throughout myriads of feedback loops linking humans with artificial social agents, in the context of digital infrastructures and pre-digital social structures. Machine Habitus will be of great interest to students and scholars in sociology, media and cultural studies, science and technology studies and information technology, and to anyone interested in the growing role of algorithms and AI in our social and cultural life.

**Automotive Machining** Jan 15 2021 Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hard-core enthusiast has not been available until now. Mike Mavrigian, editor of Engine Building Professional, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder boring, align boring/honing, decking, valveseat cutting, cam tunnel boring, and a multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important machining procedures.
