Historical Geography, GIScience and Textual Analysis Aug 30 2022 This book illustrates how literature, history and geographical analysis complement and enrich each other's disciplinary endeavors. The Hun-Lenox Globe, constructed in 1510, contains the Latin phrase 'Hic sunt dracones' ('Here be dragons'), warning sailors of the dangers of drifting into uncharted waters. Nearly half a millennium earlier, the practice of 'earth-writing' (geographia) emerged from the cloisters of the great library of Alexandria, as a discipline blending the twin pursuits of Strabo's poetic impression of places, and Herodotus' chronicles of events and cultures. Eratosthenes, a librarian at Alexandria, and the mathematician Ptolemy employed geometry as another language with which to pursue 'earth-writing'. From this ancient, East Mediterranean fount, the streams of literary perception, historical record and geographical analysis (phenomenological and Euclidean) found confluence. The aim of this collection is to recover such means and seek the fount of such rich waters, by exploring relations between historical geography, geographic information science (GIS) / geoscience, and textual analysis. The book discusses and illustrates current case studies, trends and discourses in European, American and Asian spheres,

where historical geography is practiced in concert with human and physical applications of GIS (and the broader geosciences) and the analysis of text - broadly conceived as archival, literary, historical, cultural, climatic, scientific, digital, cinematic and media. Time as a multi-scaled concept (again, broadly conceived) is the pivot around which the interdisciplinary contributions to this volume revolve. In *The Landscape of Time* (2002) the historian John Lewis Gaddis posits: "What if we were to think of history as a kind of mapping?" He links the ancient practice of mapmaking with the three-part conception of time (past, present, and future). Gaddis presents the practices of cartography and historical narrative as attempts to manage infinitely complex subjects by imposing abstract grids to frame the phenomena being examined— longitude and latitude to frame landscapes and, occidental and oriental temporal scales to frame timescapes. Gaddis contends that if the past is a landscape and history is the way we represent it, then it follows that pattern recognition constitutes a primary form of human perception, one that can be parsed empirically, statistically and phenomenologically. In turn, this volume reasons that literary, historical, cartographical, scientific, mathematical, and counterfactual narratives create their own spatio-temporal frames of reference. Confluences between the poetic and the positivistic; the empirical and the impressionistic; the epic and the episodic; and the chronologic and the chorologic, can be identified and studied by integrating practices in historical geography, GIScience / geoscience and textual analysis. As a result, new perceptions and insights, facilitating further avenues of scholarship into uncharted waters emerge. The various ways in which geographical, historical and textual perspectives are hermeneutically woven together in this volume illuminates the different methods with which to explore terrae incognitae of knowledge beyond the shores of their own separate disciplinary islands.

gives a comprehensive but in-depth analysis of the territorial development of Croatia and historical processes of significant spatial impact. It covers the millennial time span - from prehistory till the present, through relevant periods, e.g., prehistory, antiquity, Middle Ages, period of Ottoman progression and retreat, Post-Ottoman period of development of the Central European railway network, the period of South Slavic political associations (old and new Yugoslavia), and the post-Yugoslav period of independent Croatia. The book is highly illustrated with maps and figures. It is written by scholars from the region, based on the original research and the vast body of literature. It is one of the only books in English that interprets the overall development of the territory and cultural landscape of Croatia. Its scientific but comprehensive approach makes it of use to scholars, students and anyone interested in historical and geographical processes and features of Croatia and the Balkan region.

detailed and erudite book maps major stages of Quebec's development, providing a geographical record of the many social relationships that over time created a sense of place. Landscape, Courville shows, is the keeper of memory, the record of successive changes, and a witness to the genesis of the new. Places that were once agricultural, then left to waste and ruin, are today revived by tourism. Areas that now house office buildings were long ago open playgrounds where children ruled. Drawing on vast research, Courville shows how, in spite of the turbulence Quebec often endures or perhaps because of it the land itself may be seen as an important participant in the history of its peoples. Quebec: A Historical Geography was originally published by Les Presses de l'Université Laval as *Le Québec: Genèses et mutations du territoire*.

The Geography, Nature and History of the Tropical Pacific and its Islands

Jan 11 2021 This volume provides an accessible scientific introduction to the historical geography of Tropical Pacific Islands, assessing the environmental and cultural changes they have undergone and how they are affected currently by these shifts and alterations. The book emphasizes the roles of plants, animals, people, and the environment in shaping the tropical Pacific through a cross-disciplinary approach involving history, geography, biology, environmental science, and anthropology. With these diverse scientific perspectives, the eight chapters of the book provide a comprehensive overview of Tropical Pacific Islands from their initial colonization by native peoples to their occupation by colonial powers, and the contemporary changes that have affected the natural history and social fabric of these islands. The Tropical Pacific Islands are introduced by a description of their geological formation, development, and geography. From there, the book details the origins of the island's original peoples and the dawn of the political economy of these islands, including the domestication and trade of plants, animals, and other natural resources. Next,

readers will learn about the impact of missionaries on Pacific Islands, and the affects of Wold War II and nuclear testing on natural resources and the health of its people. The final chapter discusses the islands in the context of natural resource extraction, population increases, and global climate change. Working together these factors are shown to affect rainfall and limited water resources, as well as the ability to sustain traditional crops, and the capacity of the islands to accomodate its residents.

Geography Is Destiny Nov 08 2020 'Ian Morris has established himself as a leader in making big history interesting and understandable' Jared Diamond, author of *Guns, Germs and Steel* 'Morris succeeds triumphantly at cramming 10,000 years of history into a single book' Robert Colville, *Times Geography is Destiny* tells the history of Britain and its changing relationships with Europe and the wider world, from its physical separation at the end of the Ice Age to the first flickers of a United Kingdom, struggles for the Atlantic, and rise of the Pacific Rim. Applying the latest archaeological evidence, Ian Morris explores how geography, migration, government and new technologies interacted to produce regional inequalities that still affect us today. He charts Britain's geopolitical fortunes over thousands of years, revealing its transformation from a European satellite into a state at the centre of global power, commerce, and culture. But as power and wealth shift from West to East, does Britain's future lie with Europe or the wider world?

Human Geography Nov 20 2021 'Human Geography' examines the major trends, debates, research and conceptual evolution of human geography during the twentieth century. Considering each of the subject's primary subfields in turn, it addresses developments in both continental European and Anglo-American geography, providing a cutting-edge evaluation of each. Written clearly and accessibly by leading researchers, the book combines historical astuteness with personal insights and draws on a range

of theoretical positions. A central theme of the book is the relative decline of the traditional subdisciplines towards the end of the twentieth century, and the continuing movement towards interdisciplinarity in which the various strands of human geography are seen as inextricably linked. This stimulating and exciting new book provides a unique insight into the study of geography during the twentieth century, and is essential reading for anyone studying the history and philosophy of the subject.

A Historical Geography of China Jul 17 2021 The Chinese earth is pervasively humanized through long occupation. Signs of man's presence vary from the obvious to the extremely subtle. The building of roads, bridges, dams, and factories, and the consolidation of farm holdings alter the Chinese landscape and these alterations seem all the more conspicuous because they introduce features that are not distinctively Chinese. In contrast, traditional forms and architectural relics escape our attention because they are so identified with the Chinese scene that they appear to be almost outgrowths of nature. Describing the natural order of human beings in the context of the Chinese earth and civilization, "A Historical Geography of China" narrates the evolution of the Chinese landscape from prehistoric times to the present. Tuan views landscape as a visible expression of man's efforts to gain a living and achieve a measure of stability in the constant flux of nature. The book ranges the period of time from Peking man to the epoch of Mao Tse-tung. It moves through the ancient and modern dynasties, the warlords and conquests, earthquakes, devastating floods, climatic reversals, and staggering civil wars to the impact of Western civilization and industrialization. The emphasis throughout is on the effect of a changing environment on succeeding cultures. This classic study attempts to analyze and describe traditional Chinese settlement patterns and architecture. The result is a clear and succinct

examination of the development of the Chinese landscape over thousands of years. It describes the ways the Communist regime worked to alter the face of the nation. This work will quickly prove to be crucial reading for all who are interested in this pivotal nation. It goes far beyond the usual political spectrum, into the physical and social roots of Chinese history.

Geography and History Nov 28 2019 Alan Baker considers locational geographies and spatial histories, environmental geographies and environmental histories, landscape geographies and landscape histories, and regional geographies and regional histories. Seeking to bridge the "Great Divide" between history and geography, Baker identifies basic principles relating historical geography not only to history but also to geography, a reworking which signifies a "new beginning" for this scholarly hybrid.

Historical Understanding in Geography Sep 18 2021 This 1982 work conceives of historical geography as a field in its own right and as the foundation of a revitalized traditional, empirical human geography. indicators and the motivation behind their creation and evolution. The ideas and assumptions behind the indicators are made transparent to demonstrate how changes to them can dramatically alter the ranking of countries that emerge. They are, after all, human constructs and thus embody human biases. The book concludes by examining the future of indicators and the author sets out some possible trajectories, including the growing emphasis on indicators as important tools in the Sustainable Development Goals that have been set for the world up until 2030. This is a valuable resource for undergraduate and postgraduate students in the areas of economics, sociology, geography, environmental studies, development studies, area studies, business studies, politics and international relations.

American Capitals Aug 25 2019 State capitals are an indelible part of the American psyche, spatial representations of state power and national identity. Learning them by heart is a rite of passage in grade school, a pedagogical exercise that emphasizes the importance of committing place-names to memory. But geographers have yet to analyze state capitals in any depth. In *American Capitals*, Christian Montès takes us on a well-researched journey across America—from Augusta to Sacramento, Albany to Baton Rouge—shedding light along the way on the historical circumstances that led to their appointment, their success or failure, and their evolution over time. While all state capitals have a number of characteristics in common—as symbols of the state, as embodiments of political power and decision making, as public spaces with private interests—Montès does not interpret them through a single lens, in large part because of the differences in their spatial and historical evolutionary patterns. Some have remained small, while others have evolved into bustling metropolises, and Montès explores the dynamics of change and growth. All but eleven state capitals were

established in the nineteenth century, thirty-five before 1861, but, rather astonishingly, only eight of the fifty states have maintained their original capitals. Despite their revered status as the most monumental and historical cities in America, capitals come from surprisingly humble beginnings, often plagued by instability, conflict, hostility, and corruption. Montès reminds us of the period in which they came about, “an era of pioneer and idealized territorial vision,” coupled with a still-evolving American citizenry and democracy.

Borders of Chinese Civilization May 15 2021 D. R. Howland explores China's representations of Japan in the changing world of the late nineteenth century and, in so doing, examines the cultural and social borders between the two neighbors. Chinese used to portray Japan—the travel diary, poetry, and the geographical treatise. In his discussion of the practice of “brushtalk,” in which Chinese scholars communicated with the Japanese by exchanging ideographs, Howland further shows how the Chinese viewed the communication of their language and its dominant modes—history and poetry—as the textual and cultural basis of a shared civilization between the two societies. With Japan’s decision in the 1870s to modernize and westernize, China’s relationship with Japan underwent a crucial change—one that resulted in its decisive separation from Chinese civilization and, according to Howland, a destabilization of China’s worldview. His examination of the ways in which Chinese perceptions of Japan altered in the 1880s reveals the crucial choice faced by the Chinese of whether to interact with Japan as “kin,” based on geographical proximity and the existence of common cultural threads, or as a “barbarian,” an alien force molded by European influence. By probing China’s poetic and expository modes of portraying Japan, *Borders of Chinese Civilization* exposes the changing world of the nineteenth century and China’s comprehension of it. This broadly appealing work will engage scholars in the fields of Asian studies, Chinese literature, history, and geography, as well as those interested in theoretical reflections on travel or modernism.

there be so much misunderstanding? Most probably because the encounter of several disciplines is in fact the encounter of several different histories, and therefore of several different cultures, each interpreting the other according to the code dictated by its own culture. Inevitably geographers view other disciplines through their own cultural filter, and even a benevolent view remains 'ethnocentric'. It was in order to avoid such ethnocentricity that Fernand Braudel called for more unity among the social sciences in 1958 : «I wish the social sciences . . . would stop discussing their respective differences so much . . . and instead look for common ground . . . on which to reach their first agreement. Personally I would call these ways : quantification, spatial awareness and 'longue duree'». In its place at the center of the social sciences, geography reduces all social reality to its spatial dimensions. Unfortunately, as a discipline, it considers itself all too often to be in a world of its own. There is a need in France for a figure like Vidal de la Blanche who could refocus attention away from issues of time and space, towards space and social reality. Geographic research will only take a step forward once it learns to address the problems facing all the sciences.

Geography of Claudius Ptolemy Aug 18 2021 Geography of Claudius Ptolemy, originally titled Geographia and written in the second century, is a depiction of the geography of the Roman Empire at the time. Though inaccurate due to Ptolemy's varying methods of measurement and use of outdated data, Geography of Claudius Ptolemy is nonetheless an excellent example of ancient geographical study and scientific method. This edition contains more than 40 maps and illustrations, reproduced based on Ptolemy's original manuscript. It remains a fascinating read for students of scientific history and Greek influence. CLAUDIUS PTOLEMY (A.D. 90- A.D. 168) was a poet, mathematician, astronomer, astrologer, and geographer who wrote in Greek, though he was a Roman citizen. He is most well-known for three scientific treatises he wrote on astronomy, astrology, and geography, respectively titled Almagest, Apotelesmatika, and Geographia. His work influenced early Islamic and European studies, which in turn influenced much of the modern world. Ptolemy died in Alexandria as a member of Greek society.

events and the ways in which they are recalled, recorded or forgotten. It illustrates how geographical context, particular physical conditions, an area's social and economic activities and embedded cultural knowledges and infrastructures all affect community experiences of and responses to unusual weather. Contributions refer to varied methods of remembering and recording weather and how these act to curate, recycle and transmit extreme events across generations and into the future. With international case studies, from both land and sea, the book explores how and why particular weather events become inscribed into the fabric of communities and contribute to community change in different historical and cultural contexts. This is valuable reading for students and researchers interested in historical and cultural geography, environmental anthropology and environmental studies.
