Ghost Hunter's Guide to Portland and the Oregon Coast Jul 21 2021 Ghosts and spirits abound in western Oregon. The imprints of pioneers, soldiers, prostitutes, and murder victims haunt the places they trod in life, searching for loved ones, reliving joyful times, protecting favorite haunts, and seeking revenge. This guide, history, and comprehensive how-to offers tantalizing information about the lives, deaths, and locales of the Portland area's lingering past. Areas include Central Portland, East Portland communities, Vancouver and North Portland, communities south of Portland, and Oregon's coastal communities. The infamous Shanghai Tunnels have long reverberated with the screams of kidnapped victims, doomed to a brief life of forced servitude. Lone Fir Cemetery is visited to this day by the spirits of the Chinese laborers, mental asylum inmates, and Civil War veterans who rest there. Thelma Taylor can sometimes be felt in Cathedral Park, under the St. John Bridge. Historical hotels still host the spirits of guests who died, sometimes by their own hand. Opera houses and ballrooms tell a happier story: the imprints left by decades of entertainment and energy can be felt even now. These sites, and many others, are vividly described, and entries include locations and

contact information. Informative sections cover what a ghost is, how it can manifest, ideal ghost sighting conditions, and types of imprints. Techniques included are preliminary historical research, physical and mental preparation, and the two primary schools of ghost hunting: the technical and psychic methods. The technical method section covers equipment use and suggestions, and the psychic method section discusses using your intuition and sensitivity to sense phenomena. Helpful appendixes include a sighting report form; suggested readings, videos, and websites; a list of tours and events; and a collection of area museums and historical societies.

GIMP 2.8 for Photographers Mar 17 2021

Image editing is a crucial element in the photographic workflow. Image editing tools, most notably Photoshop, are usually sophisticated and deep applications, and are fairly expensive. The only open source tool in

this market is the GIMP, which has developed into a powerful, multiplatform system running on Linux, Mac OS X, and Microsoft Windows. GIMP 2.8 for Photographers is a beginner's guide to the only open source image editing tool that provides a no-cost alternative to expensive programs such as Photoshop. Topics include the new user interface and tools, the basics of image editing and simple adjustments, advanced techniques using layers and masks, developing RAW images, working with the improved text tool, and preparing high-quality black-and-white images. The most important editing functions are presented in individual, easy-to-follow workshops. A bonus section on the included DVD describes special techniques for web graphics. Quality of technical documentation Dec 14 2020 User manuals, reference guides, project documentation, equipment specifications and other technical documents are increasingly subjected to high quality standards. However, it is not clear whether research efforts are keeping pace with this increasing importance of documentation quality. This volume includes studies from researchers as well as practitioners, exemplifying three approaches towards document quality: • Product-orientation, with an eye for usability in various manifestations such as tutorials, concept definitions, tools for users of documentation to find information, methods of eliciting user feedback, and cultural differences; • Process-orientation, in which the quality of technical documentation is regarded as an outgrowth of a process involving sub-steps such as

storyboarding, pre-testing and use of automation tools in writing and producing documents; • Professional orientation, in which attention is focused on those who create technical documentation. The volume will be of interest to a broad audience of writers, managers and trainers with technical and non-technical backgrounds, such as: quality managers; communication managers; technical communicators; trainers in computer usage; teachers, researchers and students of (technical) communication.
