Each chapter of this edited volume presents an intensive examination of a key "alternative to multiple-choice testing." The content of the book's chapters ranges from reviews of issues associated with, and evidence available for, the use of particular selection text alternatives (computerized testing, performance assessments) to empirical investigation of other alternatives (biodata, creative skills); from examination of standards for choosing among selection tests to practitioners' and test takers' perspectives. This book is important for researchers and practitioners in the human resource selection field who have wanted a resource that provides a comprehensive examination of multiple-choice selection testing and its alternatives.

Intelligent Tutoring Systems Jan 28 2020 This book constitutes the refereed proceedings of the 12th International Conference on Intelligent Tutoring Systems, ITS 2014, held in Honolulu, HI, USA, in June 2014. The 31 revised full papers, 45 short papers and 27 posters presented were carefully viewed and selected from 177 submissions. The specific theme of the ITS 2014 conference is "Creating fertile soil for learning interactions". Besides that, the highly interdisciplinary ITS conferences bring together researchers in computer science, learning sciences, cognitive and educational psychology, sociology, cognitive science, artificial intelligence, machine learning and linguistics. The papers are organized in topical sections on affect; multimodality and metacognition; collaborative learning; data mining and student behavior; dialogue and discourse; generating hints, scaffolds and questions; game-based learning and simulation; graphical representations and learning; student strategies and problem solving; scaling ITS and assessment.

Cognition and Instruction Jun 22 2019 This volume is based on papers presented at the 30th Carnegie Mellon Symposium on Cognition. This particular symposium was conceived in reference to the 1974 symposium entitled Cognition and Instruction. In the 25 years since that symposium, reciprocal relationships have been forged between psychology and education, research and practice, and laboratory and classroom learning contexts. Synergistic advances in theories, empirical findings, and instructional practice have been facilitated by the establishment of new interdisciplinary journals, teacher education courses, funding initiatives, and research institutes. So, with all of this activity, where is the field of cognition and instruction? How much progress has been made in 25 years? What remains to be done? This volume proposes and illustrates some exciting and challenging answers to these questions. Chapters in this volume describe advances and challenges in four areas, including development and instruction, teachers and instructional strategies, tools for learning from instruction, and social contexts of instruction and learning. Detailed analyses of tasks, subjects' knowledge and processes, and the changes in performance over time have led to new understanding of learners' representations, their use of multiple strategies, and the important role of metacognitive processes. New methods for assessing and tracking the development and elaboration of knowledge structures and processing strategies have yielded new conceptualizations of the process of change. Detailed cognitive analysis of expert teachers, as well as a direct focus on enhancing teachers' cognitive models of learners and use of effective instructional strategies, are other areas that have seen tremendous growth and refinement in the past 25 years. Similarly, the strong impact of curriculum materials and activities based on a thorough cognitive analysis of the task has been extended to the use of technological tools for learning, such as intelligent tutors and complex computer based instructional interfaces. Both the shift to conducting a significant portion of the cognition and instruction research in real classrooms and the increased collaboration between academics and educators have brought the role of the social context to center stage.

Land Use Policy and Practice on Karst Terrains Dec 29 2019 Land use decisions in karst terrains can have immediate and serious impacts on the local landscape and groundwater resources. The existing literature on karst and land use can be very difficult to locate in the journals of any of a half-dozen different disciplines. This book brings the interdisciplinary knowledge together in one place, in a format that academics and professionals alike will find accessible, informative and useful. Based on an examination of existing regulations, the experiences and opinions of planners and land use professionals, and quantitative analysis of publicly-available data, the book explores how human settlement patterns and urban systems in karst terrains are affected by land use regulations intended to protect karst resources. The book pays particular attention to the questions of whether these regulations will have a noticeable impact on density and on opportunities for economic growth and development in communities that choose to implement them. This analysis serves as the basis for a regulatory framework that may be used to understand the workings of land use regulations in karst terrains, and to aid in the development of such regulations in the future.

e-Conquer Creative Writing For Primary Levels 1 Sep 25 2019 CONQUER CREATIVE WRITING BOOK 1 aims to provide young children with a systematic and progressive approach to composition writing. There are various types of exercises in this book: Rearrangement of words to form a sentence These exercises will encourage the students to think of the structure of a sentence carefully. Cloze passage, with pictures and helping words The pictures are direct references to the answers. The students will learn to associate a picture with a word to complete a story. This enables them to pick up new words and reinforce those that they have already learnt. Cloze passage, with a single picture and helping words The picture plays an indirect role here as it shows only the general theme of the passage. The students complete the story with the help of the words given. This encourages them to read carefully before choosing their answers. Cloze passage, without pictures but with helping words The students have to read through a passage once to get the general idea of the story. This will help them to choose the most appropriate word to fill in each blank to complete the story. Rearrangement of given sentences with pictures Reading and understanding are the focus of such questions. The students learn to rearrange given sentences to form a story based on the pictures given. Rearrangement of given sentences without pictures The students learn to think about a story in a logical sequence of events. They learn to rearrange the given sentences according to what they think is correct and logical. • Picture comprehension, guided by questions and helping words The exercises aim to teach students to think about a topic, theme or subject before writing. Helping words are given to help them express themselves better. Picture comprehension, without questions but with helping words The exercises encourage free response and writing. Given a theme, the students can write about their own experiences or make up an interesting story. Helping words are given to help them express themselves better. Imaginative writing Given a theme, the students will be asked several questions. They can use their imagination to answer the questions. These exercises enable them to be creative and to express their ideas freely. The various themes used in these exercises present a list of vocabulary that students will find useful when writing compositions on similar themes in school. The reading required to do the exercises in this book will improve the students' comprehension and writing skills.
