Mastering the Leadership Role in Project

Management Sep 05 2020 In this book, project management expert Dr. Alexander Laufer leads an all-star team of practitioners and thought leaders in presenting a powerful project leadership framework. Laufer's framework addresses the toughest challenges of new product development: large, complex projects composed of many diverse, geographically distributed, and highly interdependent components; organizational change; and repeated and risky tasks. Laufer reveals core leadership principles that are crucial to successful project leadership in dynamic and complex environments, regardless of industry, project goals, or stakeholders. Then, together with his contributors, he presents eight chapter-length case studies covering exceptionally challenging projects in a wide spectrum of industries and products – from

developing missiles to reorganizing companies, building spacecraft and dairy plants to flying solar-powered airplanes. Readers will discover new ways to unleash the power of autonomy and learning; adapt to change on a timely basis; “give up” control without “losing” control; use face-to-face interaction to maximize alignment; manage “no fun” missions in hostile environments; deliver on bold ideas through sheer preparation; learn from practice – and unlearn lessons that need to be unlearned. Mastering the Leadership Role in Project Management will be invaluable to executives, project leaders, and aspiring project leaders in all organizations – regardless of their project goals, backgrounds, or experience.

European Perspectives on Professional Development in Teacher Education Jun 02 2020 This collection focuses on the ways in which policy relating to professional development and professional learning in teacher education is changing across Europe. The chapters examine how policies change with time and with changes in personnel at various levels in the political or professional spectrum. It also highlights the continued diversity of the education systems of Europe, despite moves towards economic and social integration. A common theme running through the chapters is an understanding of the importance of professional development and professional learning of educators in the success and effective operation of the education systems

of the countries concerned. This book was originally published as a special issue of Professional Development in Education.

The Oxford Handbook of European Islam May 02 2020

For centuries, Muslim countries and Europe have engaged one another through theological dialogues, diplomatic missions, political rivalries, and power struggles. In the last thirty years, due in large part to globalization and migration from Islamic countries to the West, what was previously an engagement across national and cultural boundaries has increasingly become an internalized encounter within Europe itself. Questions of the Hijab in schools, freedom of expression in the wake of the Danish Cartoon crisis, and the role of Shari'a have come to the forefront of contemporary European discourse. The Oxford Handbook of European Islam is the first collection to present a comprehensive approach to the multiple and changing ways Islam has been studied across European countries. Parts one to three address the state of knowledge of Islam and Muslims within a selection of European countries, while presenting a critical view of the most up-to-date data specific to each country. These chapters analyze the immigration cycles and policies related to the presence of Muslims, tackling issues such as discrimination, post-colonial identity, adaptation, and assimilation. The thematic chapters, in parts four and five, examine secularism, radicalization, Shari'a, Hijab, and Islamophobia with the goal of synthesizing different

national discussion into a more comparative theoretical framework. The Handbook attempts to balance cutting edge assessment with the knowledge that the content itself will eventually be superseded by events. Featuring eighteen newly-commissioned essays by noted scholars in the field, this volume will provide an excellent resource for students and scholars interested in European Studies, immigration, Islamic studies, and the sociology of religion.

Ontology Matching Jul 28 2022 Ontologies tend to be found everywhere. They are viewed as the silver bullet for many applications, such as database integration, peer-to-peer systems, e-commerce, semantic web services, or social networks. However, in open or evolving systems, such as the semantic web, different parties would, in general, adopt different ontologies. Thus, merely using ontologies, like using XML, does not reduce heterogeneity: it just raises heterogeneity problems to a higher level. Euzenat and Shvaiko's book is devoted to ontology matching as a solution to the semantic heterogeneity problem faced by computer systems. Ontology matching aims at finding correspondences between semantically related entities of different ontologies. These correspondences may stand for equivalence as well as other relations, such as consequence, subsumption, or disjointness, between ontology entities. Many different matching solutions have been proposed so far from various viewpoints, e.g.,

databases, information systems, and artificial intelligence. The second edition of *Ontology Matching* has been thoroughly revised and updated to reflect the most recent advances in this quickly developing area, which resulted in more than 150 pages of new content. In particular, the book includes a new chapter dedicated to the methodology for performing ontology matching. It also covers emerging topics, such as data interlinking, ontology partitioning and pruning, context-based matching, matcher tuning, alignment debugging, and user involvement in matching, to mention a few. More than 100 state-of-the-art matching systems and frameworks were reviewed. With *Ontology Matching*, researchers and practitioners will find a reference book that presents currently available work in a uniform framework. In particular, the work and the techniques presented in this book can be equally applied to database schema matching, catalog integration, XML schema matching and other related problems. The objectives of the book include presenting (i) the state of the art and (ii) the latest research results in ontology matching by providing a systematic and detailed account of matching techniques and matching systems from theoretical, practical and application perspectives.

Loading the Silence: Australian Sound Art in the Post-Digital Age Jun 22 2019

The experimentalist phenomenon of 'noise' as constituting 'art' in much twentieth-century music (paradoxically) reached its zenith in Cage's ('silent' piece) 4'33 . But much post-1970s musical endeavour with an experimentalist telos, collectively known as 'sound art', has displayed a postmodern need to 'load' modernism's 'degree zero'. After contextualizing experimentalism from its inception in the early twentieth century, Dr Linda Kouvaras's *Loading the Silence: Australian Sound Art in the Post-Digital Age* explores the ways in which selected sound art works demonstrate creatively how sound is embedded within local, national, gendered and historical environments. Taking Australian music as its primary - but not sole - focus, the book not only covers discussions of technological advancement, but also engages with aesthetic standpoints, through numerous interviews,

theoretical developments, analysis and cultural milieu for a contemporary Australian, and wider postmodern, context. Developing new methodologies for synergies between musicology and cultural studies, the book uncovers a new post-postmodern aesthetic trajectory, which Kouvaras locates as developing over the past two decades - the altermodern. Australian sound art is here put firmly on the map of international debates about contemporary music, providing a standard reference and valuable resource for practitioners in the artform, music critics, scholars and educators.

Challenges of Constructing Legitimacy in Peacebuilding

Oct 07 2020 Peacebuilding is a critical issue in world politics. Surprisingly, however, there has not been a full examination of concrete policies and implementation strategies to generate legitimacy in "host states" by either international relations (IR) theorists or practitioners. The objective of this book is to develop an understanding of the mechanisms for constructing—or eroding—the legitimacy of newly created governments in post-conflict peacebuilding environments. The book argues that although existing accounts in the literature contend that compliance with key political programs, and constructing

legitimacy in peacebuilding, largely depend on the levels of force (guns) and resource distribution (money) aimed at people who are governed, there are other significant factors, such as inclusive governments reconciling with old enemies, and the substantial role of international organizations (IOs) as credible third parties to establish fairness and impartiality within the political process. Highashi focuses on an in-depth analysis of the challenges involved in creating a legitimate government in Afghanistan, focusing on disarmament programs with powerful warlords, and the reconciliation efforts with the insurgency, especially the Taliban. In the conclusion the book also examines three complimentary cases—Iraq, East Timor, and Sierra Leone—which consistently support the argument presented earlier. This work will be of interest to students and scholars of peacebuilding and conflict resolution as well as international relations more broadly.

Flexible Query Answering Systems Mar 31 2020 This volume constitutes the Proceedings of the 8th

International Conference on Flexible Query Answering Systems, FQAS 2009, held in Roskilde, Denmark, October 26–28, 2009. FQAS 2009 was preceded by the 1994, 1996 and 1998 editions held in Roskilde, Denmark, the FQAS 2000 held in Warsaw, Poland, the 2002 held in Copenhagen, Denmark, and the 2004 and 2006 editions held in Lyon, France, and in Milan, Italy, respectively.

FQAS is the premier conference concerned with the very important issue of providing users of information systems with flexible querying capabilities, and

with easy and intuitive access to information. The main objective is to

more expressive, informative, cooperative, and productive systems which facilitate retrieval from information

repositories such as databases, libraries, heterogeneous

archives and the World-Wide Web. In targeting this objective, the conference draws on several research areas,

such as information retrieval, database management, information filtering, knowledge representation, soft

computing, management of multimedia information, and human–computer interaction. The conference provides a

unique opportunity for researchers, developers and practitioners to explore new ideas and approaches in a

multidisciplinary forum. The overall topic of the FQAS conferences is innovative query systems aimed at

providing easy, flexible and human-friendly access to information. Such systems are becoming increasingly important also due to the huge and always growing number of users as well as the growing amount of available information.

Advances in Enterprise Information Systems II Dec 29 2019 For many years now Enterprise Information Systems have been critical in helping businesses successfully navigate the global market. The development that started with design and implementation of integrated systems has evolved to incorporate a multitude of perspectives and ideas. The Enterprise Information Systems functionality extends from principally an ERP (Enterprise Resource Planning) system to a portfolio of standard systems including CRM (Customer Relationship Management) systems and SCM (Supply Chain Management) systems. *Advances in Enterprise Information Systems II* is divided into seven thematic sections, each exploring a distinct topic. In "Concepts in Enterprise Information Systems" the authors present new concepts and ideas for the field.

“Cases in Enterprise Information Systems” introduces studies of enterprise information systems in an organizational context. “Business Process Management” is one of the major themes within enterprise information systems and “Designing Enterprise Information Systems” discusses new approaches to the design of processes and system and also deals with how design can be taken as a specific perspective. “Enterprise Information Systems in various domains” features generic studies that contribute to advancing the practical knowledge of the field as well as towards “Global issues of Enterprise Information Systems”. Finally, in “Emerging Topics in Enterprise Information Systems”, new technologies and ideas are explored. Cloud computing in particular seems to be setting the agenda for future research in enterprise information systems. The book will be invaluable to academics and professionals interested in recent developments in the field of enterprise information systems.

Enterprise Identity Management May 14 2021 ?The introduction of Enterprise Identity Management Systems (EIdMS) in organizations even beyond the purely

technological level is a costly and challenging endeavor. However, for decision makers it seems difficult to fully understand the impacts and opportunities arising from the introduction of EIdMS. This book explores the relevant aspects for an ex-ante evaluation of EIdMS. Therefore it examines this domain by employing a qualitative expert interview study to better understand the nature of EIdMS, as they are situated between security and productive IT systems. To this regard, the focus is put on the general nature of EIdMS projects and the constructs being relevant for analyzing such projects in the decision support phase. Based on the derived constructs and thematic topics from the interviews, an explanatory model for EIdMS introductions is derived and iteratively improved and evaluated. Finally, a possible application use-case for the creation of adequate decision support tools is presented.

Knowing What Things Are Aug 29 2022 ?This book provides an account of what is to know what things are, focusing on kinds, both natural (such as water) and social (such as marriage). It brings tools from an area that has received much attention in recent years, the epistemology of inquiry. The knowledge of what things are is to be understood as resulting from successful inquiries directed at questions of the form ‘What is x?’, where x stands for a given kind of thing. The book also addresses knowledge-wh in general (which includes knowledge-who and knowledge-where), as well as the phenomenon of

ignorance regarding what things are and our obligations in respect to knowing what things are. It also brings to light new avenues of research for those interested in the relation between the knowledge of what things are and concept possession and amelioration. 'Knowing What Things Are' should be of interest to researchers in Epistemology, Philosophy of Language, Metaphysics, Philosophy of Mind, Social Philosophy and Linguistics.
