The Evolution of a Creationist Apr 20 2021 In his book *The Evolution of a Creationist* Dr. Jobe Martin chronicles his personal journey from traditional scientist to creationist. He was a traditional evolutionist but it was his medical and scientific training that would go through an evolution when he began to study animals that challenged the scientific assumptions of his education. Dr. Martin has been exploring the evolution vs. creation debate for the past 20 years. His findings have been fascinating students around the world as he lectures on these remarkable animal designs that cannot be explained by traditional evolution.

Mathematical Models of Social Evolution Mar 08 2020 Over the last several decades, mathematical models have become central to the study of social evolution, both in biology and the social sciences. But students in these disciplines often seriously lack the tools to understand them. A primer on behavioral modeling that includes both mathematics and evolutionary theory, *Mathematical Models of Social Evolution* aims to make the student and professional researcher in biology and the social sciences fully conversant in the language of the field. Teaching biological concepts from which models can be developed, Richard McElreath and Robert Boyd introduce readers to many of the typical mathematical tools that are used to analyze evolutionary models and end each chapter

with a set of problems that draw upon these techniques. *Mathematical Models of Social Evolution* equips behaviorists and evolutionary biologists with the mathematical knowledge to truly understand the models on which their research depends. Ultimately, McElreath and Boyd's goal is to impart the fundamental concepts that underlie modern biological understandings of the evolution of behavior so that readers will be able to more fully appreciate journal articles and scientific literature, and start building models of their own.

A Study Guide for BABY DINOSAURS ON THE ARK? Mar 20 2021 It's time to address the elephant in the ark. In *Baby Dinosaurs on the Ark? The Bible and Modern Science and the Trouble of Making It All Fit*, Janet Kellogg Ray reached out to Christians who experience cognitive dissonance between their creationist commitments and modern science. With this new study guide, she returns to her argument with fresh perspective and an eye toward practical instruction. Ray approaches her topic with empathy for her readers while maintaining scientific rigor. This discussion guide is the perfect companion for students and nonexpert readers of her book, as it includes notes, discussion questions, and lists of external resources to supplement the original. Expanded treatments of each chapter's topics encourage thinking with and beyond the concepts introduced in the main text.

Science in Theology Dec 29 2021 If we wish to understand ourselves and the world in relation to God, what contribution to our understanding should we expect from a Christian tradition with its roots in the Bible, and what should we expect from the natural sciences? Neil Messer sets out five types of answer to that question. The responses range from the view that the Christian tradition has nothing to contribute, through various forms of dialogue, to the claim that science is irrelevant to theological understanding. This classification scheme is illustrated and tested by extended explorations of three topics in the science and theology field: how to think about God's action in the world, how to make theological sense of the suffering and destruction involved in the evolution of life, and how theology should respond to the scientific study of religion. The classification offers a way to understand and evaluate these debates, and the discussion of specific examples demonstrates the strengths and weaknesses of each type of approach. The book concludes with suggestions for how readers might use this scheme to guide their own work on science and theology. For students and researchers in science and theology, this book offers three things: a tool for understanding specific debates in science and theology, critical surveys of some of the most important debates in the field, and a concise guide to ways of setting up encounters of theology with science.

Summary & Study Guide - A Crack in Creation Jan 30 2022 Power and Peril of Gene Editing CRISPR/Cas9 Technology This book is a summary of "A Crack in Creation: Gene Editing and the Unthinkable Power to Control Evolution" by Jennifer A. Doudna and Samuel H. Sternberg. This book tells the story of CRISPR and "gene-editing." CRISPR is a cutting-edge gene-editing technology that mimics what happens naturally in bacteria. It enables scientists to "play god" with plant or animal DNA, with unlimited power and peril. The technology of gene editing is the most

important advance in our era. The possibility of forever altering the genetic composition of humankind is frightening. Yet we can't overlook the opportunities that may lead to inventions for cures of HIV, debilitating genetic diseases, and cancers, and end food shortages. The book will demystify this exciting area of science and inspire you to seek answers to tough moral and ethical questions on the use of this technology. Read this book and get involved in the debate on the moral and ethical issues on the use of this technology. This guide includes: * Book Summary—helps you understand the key concepts. * Online Videos—cover the concepts in more depth.
