Advances in Understanding Human Performance Sep 12 2020 Combining emerging concepts, theories, and applications of human factors knowledge, this volume focuses on discovery and understanding of human performance issues in complex systems, including recent advances in neural basis of human behavior at work (i.e. neuroergonomics), training, and universal design. The book is organized into ten sections that focus on the following subject matters: I: Neuroergonomics: Workload Assessment II: Models and Measurement in Neuroergonomics III: Neuroergonomics and Human Performance IV: Neuroergonomics and Training Issues V: Trainees: Designing for Those in Training VI: Military Human Factors: Designing for Those in the Armed Forces VII: New Programs/New Places: Designing for Those Unfamiliar with Human Factors VIII: Universal Design: Designing to Include Everyone IX: Designing for People with Disabilities X: Children and Elderly: Designing for Those of Different Ages Sections I through IV of this book focus on neuroscience of human performance in complex systems, with emphasis on the assessment and modeling of cognitive workload, fatigue, and training effectiveness. Sections V through X concentrate on applying human factors to special populations, with the caveat that the design information may not generalize to (or be of interest to) other populations. This broadens the conventional definition which limits special populations to those who have limitations in their functional abilities, i.e. those with chronic disabilities due to illness, injury, or aging. Thus, special populations can incorporate certain investigations and designs focused on military, students, or even developing countries and those naïve to the field of human factors, as well as those who are affected by disabilities and aging (both young and old). Many chapters of this book focus on analysis, design, and evaluation of challenges affecting students, trainees, members of the military, persons with disabilities, and universal design. In general, the chapters are organized to move from a more general, to a more specialized application. For example, the subtopics for those with disabilities include designing websites, workstations, housing, entrepreneur training, communication strategies, products, environments, public transportation systems, and communities. This book is of special value to a large variety of professionals, researchers and students in the broad field of human performance who are interested in neuroergonomics, training effectiveness, and universal design and operation of products and processes, as well as management of work systems in contemporary society. We hope this book is informative, but even more - that it is thought provoking. We hope it inspires, leading the reader to contemplate other questions, applications, and potential solutions in creating designs that improve function, efficiency, and ease-of-use for all. Seven other titles in the Advances in Human Factors and Ergonomics Series are: Advances in Human Factors and Ergonomics in Healthcare Advances in Applied Digital Human Modeling Advances in Cross-Cultural Decision Making Advances in Cognitive Ergonomics Advances in Occupational, Social and Organizational Ergonomics Advances in Human Factors, Ergonomics and Safety in Manufacturing and Service Industries Advances in Ergonomics Modeling & Usability Evaluation

Stealing Fatima's Hand Feb 04 2020 Stealing Fatima's Hand is an unforgettable collection of interconnected narratives presenting an alternative view of Morocco - a country not of labyrinthine alleys, Kasbahs, and smoky tea rooms - but a more madcap Morocco, one left to be discovered after all the coach tours depart. Imagine the impossible: one finds oneself in a heady and mysterious locale on the edge of North Africa, a country replete with colorful characters, incomprehensible customs and taboos, a spoken language lacking an alphabet, often frustrating religious practices and, in spite of all this capital 'E' exoticism, one still doesn't want to marry a local? Or turn a decrepit ryad into a boutique hotel? Or write for the travel page in the Sunday paper? Carolyn Th riault does more than imagine it. After making a rather drunken New Year's Resolution to toss aside their conventional lifestyle and pension plans, Carolyn, a somewhat cynical, snarky ex-pat and self-proclaimed square-peg, with her photographer husband Chris decide to walk away from their comfortable jobs in the Land of the Round Doorknobs (Canada) to travel the world. Because their long-suffering attempts at financial independence (weekly lottery tickets) have not borne any fruit, the only apparent means to rectify this situation they believe is to teach English overseas. And Morocco seems to fit the bill. But does it? Unconventional and candid - Stealing Fatima's Hand stands out as an irreverent black sheep in the literary travel genre, succeeding in undoing for Morocco everything that Peter Mayle has done for Provence. The book spans two years of Carolyn's experiences in Rabat, where with humor and honesty she struggles with Moroccan bureaucracy, sexual harassment, the threat of terrorism, devious students, randy co-teachers, and the temptation of having French pastries washed down with gin & tonics for every meal. All this in a country, where apart from her, the only vegetarians are the sheep and the goats.

Universal Usability Feb 15 2021 Universal Usability is the concept of designing computer interfaces that are easy for all users to utilize. It is a concept which many decry as elusive, impossible, or impractical, but this book, which addresses usability issues for a number of diverse user groups, proves that there is no problem in interface design that cannot be solved, or at least improved upon. Individuals with cognitive, motor, and perceptual impairments, as well as older, younger, and economically disadvantaged users, face a variety of complex challenges when interacting with computers. However, with user involvement, good design practice, and thorough testing, computer interfaces can be successfully developed for any user population. This book, featuring key chapters by Human-Computer Interaction luminaries such as Jonathan Lazar, Ron Baecker, Allison Druin, Ben Shneiderman, Brad Myers and Jenny Preece, examines innovative and groundbreaking research and practice, and provides a practical overview of a number of successful projects which have addressed a need for these specific user populations. Chapters in this book address topics including age diversity, economic diversity, language diversity, visual impairment, and spinal cord injuries. Several of these trailblazing projects in the book are amongst the first to examine usability issues for users with Down Syndrome, users with Amnesia, users with Autism Spectrum Disorders, and users with Alzheimer's Disease, and coverage extends to projects where multiple categories of needs are addressed. These chapters represent real-world projects, being carried out on different continents. The authors of the chapters also represent diversity—interface researchers and software developers in university, industrial, and government settings. In the practical spirit of the book, chapter authors provide guidelines and suggestions for those attempting similar projects, as well as implications for different stakeholders such as policymakers, researchers, and designers. Ideal for students of HCI and User Interface Design, and essential reading for usability practitioners, this fascinating collection of real-world projects demonstrates that computer interfaces can truly be designed to meet the needs of any category of user.
