Educational Research May 22 2021 Researchers finally have a resource that focuses on the research question, providing them with a unique approach that will help in the field. Key Ideas sections presented in each chapter act as an organising mechanism and look at the big picture of that chapter. Many of the writing activities are open-ended questions that allow them to write questions or what they are thinking about the topic at that point. In-Text Activities ask them to write down what they are working on, such as a research question, review of literature, or potential sample. Case study examples are also integrated throughout to demonstrate how decisions are made and how they affect everything in a study. This enables researchers to create the most effective studies.

Understanding Leadership Oct 03 2019 Lao Tzu, Marx, the Buddha, Ibsen, Machiavelli — these are just a few of the world's great thinkers who have weighed in on the subject of leadership over the centuries. Yet, the contemporary student of leadership often overlooks many of these names in favour of more recent theorists hailing from the social sciences. Understanding Leadership: An Arts and Humanities Perspective takes a different angle, employing the works of the great philosophers, authors and artists found in world civilization and presenting an arts and humanities perspective on the study of leadership. The authors build their conceptual framework using The Five Components of Leadership Model, which recognizes the leader, the followers, the goal, the environmental context, and the cultural values and norms that make up the leadership process. Supporting the text are a wealth of case studies which reflect on works such as Ayn Rand's novella Anthem, Eugène Delacroix's painting Liberty Leading the People, Charlie Chaplin's film Modern Times, Athol Fugard's play "Master Harold" . . . and the Boys, Lao Tzu's poetic work Tao Te Ching, and Antonin Dvořák's New World Symphony. The authors also introduce studies from various world cultures to particularly illustrate the role cultural values and norms play in leadership. This illuminating framework promotes the multidimensional thinking that is necessary for understanding and problem solving in a complex world. Understanding Leadership: An Arts and Humanities Perspective will be a valuable textbook for both undergraduate and postgraduate leadership students, while leadership professionals will also appreciate the book's unique liberal arts and cultural approach.

Application of Nature Based Algorithm in Natural Resource Management Dec 29 2021 This book highlights the application of nature-based algorithms in natural resource management. The book includes the methodologies to apply what natural flora or fauna do to optimize their survival. The same technique was used to optimize renewable energy generation from water resources, maximization of profit from crop harvesting, forest resource management and decision-making studies. These studies can be used as an example for finding solutions of the other maximization or minimization problems which are common in natural resource management.

Collapse, Volume 3 Jan 18 2021 Explorations of Deleuze's work by pioneering thinkers from philosophy, aesthetics, music, and architecture. A collection of explorations of the work of Gilles Deleuze by pioneering thinkers in the fields of philosophy, aesthetics, music, and architecture. The volume also includes a previously untranslated early text by Deleuze and a short interview, along with a fascinating piece of vintage science fiction from one of his more obscure influences. The contributors to this volume aim to clarify, from a variety of perspectives, Deleuze's contribution to philosophy: in what does his philosophical originality lie; what does he appropriate from other philosophers and how does he transform it? And how can the apparently disparate threads of his work to be "integrated"—What is the precise nature of the constellation of the aesthetic, the conceptual and the political proposed by Gilles Deleuze, and what are the overarching problems in which the numerous philosophical concepts "signed Deleuze" converge? As an annex to the second volume of Collapse, this volume also include a full transcript of the workshop on "Speculative Realism" held in London in 2007.

Suriname Nov 15 2020 This paper reviews economic developments in Suriname during 1994-96. In 1995, there was a major turnaround in Suriname's economic and financial situation following the expansionary fiscal and monetary policies pursued in the first half of the 1990s and the political and economic disruptions of the 1980s. The marked improvement was owing to the restoration of financial discipline, a strengthening of international bauxite prices, and the unification and subsequent stabilization of the exchange rate. The inflation fell further to less than 1 percent in 1996.

Relativity Reexamined Nov 03 2019 Relativity Reexamined examines relativity from a new angle and with an unconventional perspective. Topics covered range from quantum theory and relativity to gravitation and relativity quantized atomic clocks, as well as special relativity Doppler effect and spherical symmetry. A distinction is also made between mathematical coordinates and physical frames of reference. This book is comprised of eight chapters and begins by considering the development of scientific theories in general, citing examples to show how scientists' viewpoints have progressively changed. Some of the problems that have emerged, and which even Albert Einstein was unable to foresee, are highlighted. The first chapter reviews the historical sequence of events that led to quantum theory and relativity, while the second chapter focuses on some problems about restricted relativity, paying particular attention to the meaning of potential energy and the importance of field theory in relativistic theories. The following chapters analyze a variety of experimental evidences that challenge many basic assumptions in theoretical physics, focusing on the fundamental importance of the Mössbauer effect and of atomic clocks; the link between gravitation and relativity; classical problems of theoretical mechanics; and special relativity Doppler effect. A gravitastic problem with spherical symmetry is also described. This monograph will be of interest to physicists and students of physics.
