Building Product Models Oct 16 2021 *Building Product Models* thoroughly presents the concepts, technology, and methods now used to work out what will become the building product model - a new, digital representation for architecture, civil engineering, and building construction. Organized into three sections (history, current tools and concepts, and existing efforts and research issues), this resource provides the field of building product modeling with a standard reference as well as a single, comprehensive text for university courses. Until now, all the efforts in building modeling have been reported in research journals and conference proceedings or been made available as draft standards on the Internet. *Building Product Models* is the only book available on this vital field, bringing together essential aspects of major efforts from the early 1970s to the present.

Fused Deposition Modeling Based 3D Printing Mar 09 2021 This book covers 3D printing activities by fused deposition modeling process. The two introductory chapters discuss the principle, types of machines and raw materials, process parameters, defects, design variations and simulation methods. Six chapters are devoted to experimental work related to process improvement, mechanical testing and characterization of the process, followed by three chapters on post-processing of 3D printed components and two chapters addressing sustainability concerns. Seven chapters discuss various applications including composites, external medical devices, drug delivery system, orthotic inserts, watertight components and 4D printing using FDM process. Finally, six chapters are dedicated to the study on modeling and optimization of FDM process using computational models, evolutionary algorithms, machine learning, metaheuristic approaches and optimization of layout and tool path.

[Customization 4.0](#) Sep 03 2020 This proceedings volume presents the latest research from the worldwide mass customization & personalization (MCP) community bringing together new thoughts and results from various disciplines within the field. The chapters are based on papers from the MCPC 2017. The book showcases research and practice from authors that see MCP as an opportunity to extend or even revolutionize current business models. The current trends of Industrie 4.0, digital manufacturing, and the rise of smart products allow for a fresh perspective on MCP: Customization 4.0. The book places a new set of values in the centre of the debate: a world with finite resources, global population growth, and exacerbating climate change

needs smart thinking to engage the most effective capabilities and resources. It discusses how Customization 4.0 fosters sustainable development and creates shared value for companies, customers, consumers, and the society as a whole. The chapters of this book are contributed by a wide range of specialists, offering cutting-edge research, as well as insightful advances in industrial practice in key areas. The MCPC 2017 has a strong focus on real life MCP applications, and this proceedings volume reflects this. MCP strategies aim to profit from the fact that people are different. Their objective is to turn customer heterogeneities into opportunities, hence addressing “long tail” business models. The objective of MCP is to provide goods and services that best serve individual customers’ needs with near mass production efficiency. This proceedings volume highlights the interdisciplinary work of thought leaders, technology developers, and researchers with corporate entrepreneurs putting these strategies into practice. Natural Rubber Oct 28 2022 ISBN : 978-967-2454-09-0 Author : Mohd Azli Salim Laminated rubber-metal bearing from natural rubber also been well-known as a vibration isolator to block vibration energy. However, most of existing works on the bearing especially the mathematical models consider only the performance of the bearing due to the static force. Development of mathematical model for dynamic force and also its response is still lacking. Additionally, application of the existing rubber bearings only focuses on motion in the horizontal direction (sliding motion) intended to counter the energy coming from the earthquake. In this book, it is of interest to develop new techniques to perform the performance of the bearing subjected to axial excitation, and also to explore the potential of the vibration isolator for other applications, where dynamic loading can come from axial direction, such as cars passing by on the bridge or highway, or ground-borne vibration from railway lines. At the end, the model can be used for many applications which are mechanical, civil, building and many more.

Applications of Fibonacci Numbers Jul 01 2020 This book contains 43 papers form among the 55 papers presented at the Sixth International Conference on Fibonacci Numbers and Their Applications which was held at Washington State University, Pullman, Washington, from July 18-22, 1994. These papers have been selected after a careful review by well known referees in the field, and they range from elementary number theory to probability and statistics. The Fibonacci numbers and recurrence relations are their unifying bond. It is anticipated that this book, like its five predecessors, will be useful to research workers and graduate students interested in the Fibonacci numbers and their applications. Power Shovels : The World's Mightiest Mining and Construction Excavators Dec 06 2020 Power Shovels is a celebration of the land leviathans that have inhabited the open pit mines over the past century. Due to their massive size and unbelievable capabilities, interest in these machines extends far beyond their role in the extraction of minerals and precious metals. Author Orlemann focuses on the super stripper and loading class of shovels. Discover how the super stripper can remove vast amounts of earth and place it over a football field away. This book reveals design, engineering, manufacture, assembly, and operation of these modern and massive shovels.
