Advanced Intelligent Systems for Sustainable Development (AI2SD'2018) Jul 24 2021 This book gathers papers presented at the International Conference on Advanced Intelligent Systems for Sustainable Development (AI2SD-2018), which was held in Tangiers, Morocco on 12-14 July 2018. In addition to the latest research in the field of energy, it offers new solutions, tools and effective techniques, and provides essential information on smart grids, renewable and economical energy. Further, it addresses modeling, storage management and decision support in the field of energy, offering a valuable guide for researchers, professionals and all those who are interested in the development of advanced intelligent systems in the energy sector.

*Systems of Commercial Turbofan Engines* May 22 2021 To understand the operation of aircraft gas turbine engines, it is not enough to know the basic operation of a gas turbine. It is also necessary to understand the operation and the design of its auxiliary systems. This book fills that need by providing an introduction to the operating principles underlying systems of modern commercial turbofan engines and bringing readers up to date with the latest technology. It also offers a basic overview of the tubes, lines, and system components installed on a complex turbofan engine. Readers can follow detailed examples that describe engines from different manufacturers. The text is recommended for aircraft engineers and mechanics, aeronautical engineering students, and pilots.

*The Mull of Kintyre Review* Feb 16 2021 The Review team were appointed to examine all available evidence relating to the findings of the RAF Board of Inquiry in the fatal accident on 2 June 1994 in which RAF Chinook helicopter ZD576 crashed on the Mull of Kintyre, killing all 29 on board. The accident resulted in one of the worst peacetime accident and dealt a severe blow to the services and agencies of which the passengers were important members. The investigating Board were unable to determine a definite cause of the accident despite detailed analysis. They, however,

concluded that the most probable cause was the selection by the pilots of an inappropriate rate of climb which was insufficient to enable them to safely overfly the high ground of the Mull of Kintyre. The finding has been and remains controversial. The unfairness to deceased aircrew in disciplinary procedures was recognised and the Air Force Board has accepted the introduction of a provision which created a very high standard of proof in relation to findings of negligence. Because of the absence of a cockpit recorder and flight data recorder it cannot be known what was going on in the cockpit in the moments before the crash. The Reviewing Officers' approach to this gap in the evidence was to apply to both pilots what amounted to a presumption of negligence which was inconsistent with the standard of proof. In conclusion this Review recommends that the findings of pilot negligence be set aside; that the Ministry of Defence should consider offering an apology the pilots' families; and that the Ministry of Defence should reconsider its policy and procedures for the transport of personnel
