Ancient Textiles Modern Science II Aug 18 2021 Ancient Textiles Modern Science II follows the success of the first proceedings, published in 2013, that catalogued the Forum's formative years. This proceedings highlights the range of subjects and approaches, from improved forms of notation for nãbinding and terminology for non-woven fabric structures, to presentation and practical interpretation of new and unique discoveries from Lengberg Castle and of Roman leather underpants. The significance of unrealised assumptions and unappreciated historic decisions is shown through the discovery of weaving tablets unrecognised during their excavation and the effects of water supply on the outcome of dyeing in Pompeii. Practical investigations of historic resist dyeing, methods to selectively colour early Byzantine embroidery after its completion, and how the choice of metal in dyeing kettles influences dyeing outcomes make up the rest of this volume. The European Textile Forum provides a place where ideas can be exchanged and aims to give a good practical foundation for further research. The end result is an understanding of each aspect of historic textiles that is greater than the sum of its individual parts., The Forum continues to explore textile artefacts, tools, methods of production, recording notation and the historic and contemporary meaning of textiles.

The Power of Posture Jun 15 2021 The concept of Functional Patterns is a train of thought that has been building upon itself over the course of my entire lifetime. I was taught at a very young age to question authority and everything around me by my highly skeptical parents. My parents were extremely hard workers who were very resourceful with the little money they had. They lived by the "practice what you preach" motto in every sense they could. The apple didn't fall very far from the tree and I have embodied (to the best of my ability) what I was fortunate enough to be taught at a very young age. The Functional Patterns method didn't start with the memorization of techniques. It started at a base of reasoning that has seemingly been missing from the industry of health today. When ego checking experiences of life mixed with the values I had already wired in from my childhood, a different approach towards looking at the human organism emerged.

Object Thinking Mar 13 2021 In OBJECT THINKING, esteemed object technologist David West contends that the mindset makes the programmer—not the tools and techniques. Delving into the history, philosophy, and even politics of object-oriented programming, West reveals how the best programmers rely on analysis and conceptualization—on thinking—rather than formal process and methods. Both provocative and pragmatic, this book gives form to what’s primarily been an oral tradition among the field’s revolutionary thinkers—and it illustrates specific object-behavior practices that you can adopt for true object design and superior results. Gain an in-depth understanding of: Prerequisites and principles of object thinking. Object knowledge implicit in eXtreme Programming (XP) and Agile software development. Object conceptualization and modeling. Metaphors, vocabulary, and design for object development. Learn viable techniques for: Decomposing complex domains in terms of objects. Identifying object relationships, interactions, and constraints. Relating object behavior to internal structure and implementation design. Incorporating object thinking into XP and Agile practice.

Kill the Company Nov 01 2022 In the ever-changing world of business, we've arrived at a point where process has trumped culture, where the race toward efficiency has left us unable to reach our potential. Stuck in the land of status quo, we've forgotten how to think. The very structures put in place to help businesses grow are now holding us back;; it's time to Kill the Company. This book is a call to arms: to start a revolution in how we think and work. But instead of more one-size-fits-all change initiatives forced upon employees, we need to embrace small changes that create ripple effects throughout the organization. Lisa Bodell urges companies to move from "Zombies, Inc." to "Think, Inc." Thinking can no longer be exclusive to the creative team or lead strategists. A culture of curiosity must be fostered among the ranks to shake up our standard practices, from unproductive meetings to go-nowhere strategic planning. This revolution can and will awaken our ability to think, and ultimately, to innovate and grow.
