Evidence-Based Applied Sport Psychology Jun 15 2021 " Sports psychology is a rapidly growing field, with numerous societies, conferences, journals and practitioners. The breadth and quality of scientific research in this field has grown considerably in the past decade, with sophisticated fMRI, EEG, and psychophysiological measures now complementing traditional interventions. How to integrate the voluminous amount of research into day-to-day practice still remains a challenge for most practitioners. Roland A. Carlstedt now sets forth the only book that collects this vast amount of research for the practitioner, educator, and student. Carlstedt presents cutting-edge assessment methods, intervention procedures, and research that are critical for use in evidence-based practice. Practitioners will learn how to work within Carlstedt's integrative model to improve athlete performance and contribute to the advancement of evidence-based applied sport psychology. "

Guidance Manual on Water Supply and Sanitation Programmes Feb 09 2021 The Department for International Development DFID commissioned this Guidance Manual from the WELL Resource Centre to assist staff and partners to develop effective and sustainable water supply and sanitation programmes. It represents collaboration across a range of professions within the Department and from key UK professionals in the sector. It details inter-disciplinary approaches to planning and implementation of partnership-based programmes. The Manual comprises three chapters and appendices. These take the reader from an overview of the sector, through specific development perspectives, to detailed recommendations for each stage of the project cycle. Chapter 1 is an introduction to water supply and sanitation projects and sets the scene. It describes the WSS&S sector with particular focus on the development of services for the poor in both urban and rural areas. Emphasis is placed on the importance of co-operation and partnership and the chapter also introduces the DFID programme and project process. Chapter 2 Principles and practice starts with an inter-disciplinary analysis of key issues and then sets out recommended approaches under seven perspectives: social development; health; environmental sustainability; economic and financial perspectives; institutional perspectives; technical aspects; and hygiene promotion and sanitation promotion. These are explored in some detail so that professional staff in DFID and its partners will gain a better understanding of all the aspects and not just their own speciality. Chapter 3 Water supply and sanitation in the DFID programme and project cycle is the 'how to' part of the manual which brings together the disciplinary perspectives at each stage of the project cycle. The key issues to be taken into account are set out in a helpful 'question and recommendation' format. Appendices include examples of logical frameworks for water supply and sanitation projects.

World Migration 2008 Sep 18 2021 World Migration 2008 focuses on the labour mobility of people in today's evolving global economy. It provides policy findings and practical options with a view to making labour migration more effective and equitable and to maximizing the benefits of labour migration for all stakeholders concerned. The report also analyses migration flows, stocks and trends and surveys current migration developments in the major regions of the world.

World Migration Report 2008 Mar 25 2022 The task of formulating workable approaches to the management of international migration remains a

formidable challenge for the community, one that will require both time and effort over the coming years. In what terms are we to develop comprehensive migration management strategies that will help us achieve coherence of action? What organizing principles should be adopted? Is there, in conceptual terms, a point of leverage to move the debate forward? Part of the problem lies in the difficulty of coming to a consensus about the fundamental nature of migration and its outcomes. Underlying the current and welcome inclination to acknowledge the potentially beneficial outcomes of migratory phenomena are many questions that are yet to be fully resolved. In the midst of that uncertainty there are suggestions worth exploring that contemporary migration – as opposed to whatever its historical antecedents may have been – is uniquely related to and defined by those processes of economic and social integration collectively known as globalization. The argument is that, whether by design or not, these developments are largely responsible for the creation of an unprecedented context in which human mobility seeks to find expression on a genuinely global scale. The World Migration Report 2008 tackles this issue directly and seeks to identify policy options that might contribute to the development of broad and coherent strategies to better match demand for migrant workers with supply in safe, humane and orderly ways. Part A of the Report explores the nature and magnitude of the need for such strategies through the observation and analysis of a wide range of contemporary migratory patterns linked to economic purposes while Part B discusses the contours of possible policy responses.

Process Engineering and Industrial Management Mar 13 2021 Process Engineering, the science and art of transforming raw materials and energy into a vast array of commercial materials, was conceived at the end of the 19th Century. Its history in the role of the Process Industries has been quite honorable, and techniques and products have contributed to improve health, welfare and quality of life. Today, industrial enterprises, which are still a major source of wealth, have to deal with new challenges in a global world. They need to reconsider their strategy taking into account environmental constraints, social requirements, profit, competition, and resource depletion. "Systems thinking" is a prerequisite from process development at the lab level to good project management. New manufacturing concepts have to be considered, taking into account LCA, supply chain management, recycling, plant flexibility, continuous development, process intensification and innovation. This book combines experience from academia and industry in the field of industrialization, i.e. in all processes involved in the conversion of research into successful operations. Enterprises are facing major challenges in a world of fierce competition and globalization. Process engineering techniques provide Process Industries with the necessary tools to cope with these issues. The chapters of this book give a new approach to the management of technology, projects and manufacturing. Contents Part 1: The Company as of Today 1. Receptor Tyrosine Kinases: Structure, Functions and Role in Human Disease Apr 13 2021 Receptor Tyrosine Kinase: Structure, Functions and Role in Human Disease, for the first time, systematically covers the shared structural and functional features of the RTK family. Receptor Tyrosine Kinases (RTKs) play critical roles in embryogenesis, normal physiology and several diseases. And over the last decade they have become the Number 1 targets of cancer drugs. To be able to conduct fundamental research or to attempt to develop pharmacological agents able to enhance or intercept them, it is essential first to understand the evolutionary origin of the 58 RTKs and their roles in invertebrates and in humans, as well as downstream signaling pathways. The assembly of chapters is written by experts and underscores commonalities between and among the RTKs. It is an ideal companion volume to The Receptor Tyrosine Kinase: Families and Subfamilies, which proceeds, family by family through all of the specific subfamilies of RTKs, along with their unique landmarks.

Global Status Report on Road Safety 2018 Jan 11 2021 The Global status report on road safety 2018 launched by WHO in December 2018 highlights that the number of annual road traffic deaths has reached 1.35 million. Road traffic injuries are now the leading killer of people aged 5-29 years. The burden is disproportionately borne by pedestrians cyclists and motorcyclists in particular those living in developing countries. The report suggests that the price paid for mobility is too high especially because proven measures exist. Drastic action is needed to put these measures in place to meet any future global target that might be set and save lives.
