Advances in Chromatography Jun 19 2021 Written by leading international experts in academia and industry, Advances in Chromatography, Volume 46 presents all new chapters with thorough reviews on the latest developments in the field. Volume 46 includes new advances in two-dimensional gas chromatography, reversed phase liquid chromatography/shape selectivity, and supercritical fluid chromatography. The book highlights enantioselective separations with emphasis on chiral recognition mechanisms, screening approaches, and separation speed. It also emphasizes hyphenated techniques and enhanced fluidity chromatography with emphasis on monolithic organo-silica hybrid columns. This volume provides an excellent starting point for gaining quick knowledge to the field of separation science.

Chrysler Engines, 1922-1998 Aug 22 2021 This book chronicles over 75 years of engine design, development, and production at Chrysler Corporation. Every production engine built by Chrysler is covered in detail, with descriptions, pictures, specifications, and timelines provided for each. In addition to the

specifications, the book also looks at the personalities behind the engines' development, and the vehicles in which the engines were used.

*Proceedings of the First International Conference on Recent Advances in Bioenergy Research Jan 03 2020* This contributed volume aims to provide latest updates in the area of bioenergy including biodiesel, bioethanol, biomethanation, biomass gasification, and biomass cook-stove. The proceedings of ICRABR 2015 include cutting edge research vital to R&D organizations, academics, and the industry to promote and document the recent developments in the area of bioenergy for all types of stakeholders. The volume highlights the needs of biofuels and their market, the barriers and challenges faced by biofuels and bioenergy and future strategies required to foster new ideas for research, collaboration and commercialization of bioenergy. The major themes of this contributed volume are: Biomass and Energy Management ;Thermochemical Conversion Processes; Biochemical Conversion Processes; Catalytic Conversion Processes; Electrochemical Processes; Waste Treatment to Harvest Energy; and Integrated Processes. The contents of the volume will appeal to students, researchers, professionals, and policymakers in the field of biofuels and bioenergy.

*Bioprocessing Technologies in Biorefinery for Sustainable Production of Fuels, Chemicals, and Polymers Dec 14 2020* For researchers already familiar with biomass conversion technologies and for professionals in other fields, such as agriculture, food, and chemical industries, here is a comprehensive review of the emerging biorefinery industry. The book's content has been conveniently organized according to technologies (biomass feedstock and pretreatment,

hydrolytic enzymes in biorefinery, and biofuels), with each chapter highlighting an important biobased industrial product. For undergraduate and graduate students, the book is a thorough introduction to biorefinery technologies.

*Molecular Biology of Assemblies and Machines* Nov 12 2020 *Molecular Biology of Assemblies and Machines* presents a comprehensive narrative describing the structures of macromolecular complexes and how they assemble and interact. Richly illustrated, it is written for advanced undergraduates, graduate students, and researchers in biochemistry, structural biology, molecular biology, biophysics, cell biology, and microbiology, and will also appeal to those in chemistry, immunology, and medicine. Essentially all major biological activities are performed by assemblies of macromolecules (proteins, RNA, and DNA) acting in concert. These assemblies are dynamic and many are endowed with machine-like properties. This unique book explores the molecular mechanisms employed at the critical level between individual macromolecules and cells and organelles.
