Parameter Setting in Evolutionary Algorithms Feb 18 2022 One of the main difficulties of applying an evolutionary algorithm (or, as a matter of fact, any heuristic method) to a given problem is to decide on an appropriate set of parameter values. Typically these are specified before the algorithm is run and include population size, selection rate, operator probabilities, not to mention the representation and the operators themselves. This book gives the reader a solid perspective on the different approaches that have been proposed to automate control of these parameters as well as understanding their interactions. The book covers a broad area of evolutionary computation, including genetic algorithms, evolution strategies, genetic programming, estimation of distribution algorithms, and also discusses the issues of specific parameters used in parallel implementations, multi-objective evolutionary algorithms, and practical consideration for real-world applications. It is a recommended read for researchers and practitioners of evolutionary computation and heuristic methods.

Legal Foundations of Tribunals in Nineteenth Century England Nov 22 2019 Nineteenth-century governments faced considerable challenges from the rapid, novel and profound changes in social and economic conditions resulting from the industrial revolution. In the context of an increasingly sophisticated and complex government, from the 1830s the specialist and largely lay statutory tribunal was conceived and adopted as the principal method of both implementing the new regulatory legislation and resolving disputes. The tribunal's legal nature and procedures, and its place in the machinery of justice, were debated and refined throughout the Victorian period. In examining this process, this 2007 book explains the interaction between legal constraints, social and economic demand and political expediency that gave rise to this form of dispute resolution. It reveals the imagination and creativity of the legislators who drew on diverse legal institutions and values to create the new tribunals, and shows how the modern difficulties of legal classification were largely the result of the institution's nineteenth-century development.

Judges and Judging in the History of the Common Law and Civil Law Sep 25 2022 In this collection of essays, leading legal historians address significant topics in the history of judges and judging, with comparisons not only between British, American and Commonwealth experience, but also with the judiciary in civil law countries. It is not the law itself, but the process of law-making in courts that is the focus of inquiry. Contributors describe and analyse aspects of judicial activity, in the widest possible legal and social contexts, across two millennia. The essays cover English common law, continental customary law and *ius commune*, and aspects of the common law system in the British Empire. The volume is innovative in its approach to legal history. None of the essays offer straight doctrinal exegesis; none take refuge in old-fashioned judicial biography. The volume is a selection of the best papers from the 18th British Legal History Conference.

Recent Advances in Antenna Design for 5G Heterogeneous Networks Apr 20 2022 The aim of this book is to highlight up to date exploited technologies and approaches in terms of antenna designs and requirements. In this regard, this book targets a broad range of subjects, including the microstrip antenna and the dipole and printed monopole antenna. The varieties of antenna designs, along with several different approaches to improve their overall performance, have given this book a great value, in which makes this book is deemed as a good reference for practicing engineers and under/postgraduate students working in this field. The key technology trends in antenna design as part of the mobile communication evolution have mainly focused on multiband, wideband, and MIMO antennas, and all have been clearly presented, studied and implemented within this book. The forthcoming 5G systems consider a truly mobile multimedia platform that constitutes a converged networking arena that not only includes legacy heterogeneous mobile networks but advanced radio interfaces and the possibility to operate at mm wave frequencies to capitalize on the large swathes of available bandwidth. This provides the impetus for a new breed of antenna design that, in principle, should be multimode in nature, energy efficient, and, above all, able to operate at the mm wave band, placing new design drivers on the antenna design. Thus, this book proposes to investigate advanced 5G antennas for heterogeneous applications that can operate in the range of 5G spectrums and to meet the essential requirements of 5G systems such as low latency, large bandwidth, and high gains and efficiencies.

Theoretical Aspects of Computer Software Jan 25 2020 This volume constitutes the proceedings of the Fourth International Symposium on Theoretical Aspects of Computer Software (TACS 2001) held at Tohoku University, Sendai, Japan in October 2001. The TACS symposium focuses on the theoretical foundations of programming and their applications. As this volume shows, TACS is an international symposium, with participants from many different institutions and countries. TACS 2001 was the fourth symposium in the TACS series, following TACS'91, TACS'94, and TACS'97, whose proceedings were published as Volumes 526, 789, and 1281, respectively, of Springer-Verlag's Lecture Notes in Computer Science series. The TACS 2001 technical program consisted of invited talks and contributed talks. In conjunction with this program there was a special open lecture by Benjamin Pierce; this lecture was open to non-registrants. TACS 2001 benefited from the efforts of many people; in particular, members of the Program Committee and the Organizing Committee. Our special thanks go to the Program Committee Co-chairs: Naoki Kobayashi (Tokyo Institute of Technology) Benjamin Pierce (University of Pennsylvania).

Onomastics between Sacred and Profane Apr 27 2020 Religiously, God is the creator of everything seen and unseen; thus, one can ascribe to Him the names of His creation as well, at least in their primordial form. In the mentality of ancient Semitic peoples, naming a place or a person meant determining the role or fate of the named entity, as names were considered to be mysteriously connected with the reality they designated. Subsequently, God gave people the freedom to name persons, objects, and places. However, people carried out this act (precisely) in relation to the divinity, either by remaining devoted to the sacred or by growing estranged from it, an attitude that generated profane names. The sacred/profane dichotomy occurs in all the branches of onomastics, such as anthroponymy, toponymy, and ergonymy. It is circumscribed to complex and interdisciplinary analysis which does not rely on language sciences exclusively, but also on

theology, ethnology, sociology, psychology, philosophy, anthropology, geography, history and other connected fields, as well as culture in general. Despite the contributors' cultural diversity (29 researchers from 16 countries – England, Finland, Germany, Hungary, Italy, Japan, Jordan, Kenya, Nigeria, Poland, Romania, Russia, South Africa, Spain, U.S.A., and Zimbabwe – on four continents) and their adherence to different religions and faiths, the studies in Onomastics between Sacred and Profane share a common goal that consist of the analysis of names that reveal a person's identity and behavior, or the existence, configuration and symbolic nature of a place or an object. One can state that names are tightly connected to the surrounding reality, be it profane or religious, in every geographical area and every historical period, and this phenomenon can still be observed today. The particularity of this book lies in the multicultural and multidisciplinary approach in theory and praxis.

Modern Masters Dec 24 2019 Kunstmuseum Bern, the oldest museum in Switzerland, turns its gaze toward its own acquisition history in this lavish book that features artistic masterpieces considered worthless by the Nazis, and the stories of how they came to Switzerland. As a result of the Nazi regime's scorn for modern art, virtually all non-traditional art between 1933 and 1945 was banned in Germany on the grounds that it was un-German, Jewish, or Communist in nature. Those identified as degenerate artists were dismissed from teaching positions and forbidden to exhibit or to sell their works. This book sheds light on the historical significance and provenance of nearly 525 works by modernist greats, such as Picasso, Chagall, and Kandinsky, which were acquired by the Kunstmuseum Bern through a combination of auctions and private donations. The book traces the fates of artists who suffered under the Nazi regime and who had connections to Switzerland, including Kirchner, Klee and Dix, and contrasts the cultural policies of the Third Reich with those of Switzerland in the same period. Finally, it details the dramatic events and unprecedented efforts that went into preserving invaluable works of art."

Semantics Engineering with PLT Redex Dec 16 2021 The first comprehensive presentation of reduction semantics in one volume, and the first tool set for such forms of semantics. This text is the first comprehensive presentation of reduction semantics in one volume; it also introduces the first reliable and easy-to-use tool set for such forms of semantics. Software engineers have long known that automatic tool support is critical for rapid prototyping and modeling, and this book is addressed to the working semantics engineer (graduate student or professional language designer). The book comes with a prototyping tool suite to develop, explore, test, debug, and publish semantic models of programming languages. With PLT Redex, semanticists can formulate models as grammars and reduction models on their computers with the ease of paper and pencil. The text first presents a framework for the formulation of language models, focusing on equational calculi and abstract machines, then introduces PLT Redex, a suite of software tools for expressing these models as PLT Redex models. Finally, experts describe a range of models formulated in Redex. PLT Redex comes with the PLT Scheme implementation, available free at <http://www.plt-scheme.org/>. Readers can download the software and experiment with Redex as they work their way through the book.

Recent Technical Developments in Energy-Efficient 5G Mobile Cells Mar 27 2020 This book addresses the true innovation in engineering design that may be promoted by blending together models and methodologies from different disciplines, and, in this book, the target was exactly to follow this approach to deliver a new disruptive architecture to deliver these next-generation mobile small cell technologies. According to this design philosophy, the work within this book resides in the intersection of engineering paradigms that includes “cooperation”, “network coding”, and “smart energy-aware frontends”. These technologies will not only be considered as individual building blocks, but re-engineered according to an inter-design approach resulting in the enabler for energy efficient femtocell-like services on the move. The book aims to narrow the gap between the current networking technologies and the foreseen requirements that are targeted at the future development of the 5G mobile and wireless communications networks in terms of the higher networking capacity, the ability to support more users, the lower cost per bit, the enhanced energy efficiency, and adaptability to new services and devices (for example, smart cities, and the Internet of things (IoT)).
