**The Difference** Nov 05 2022 In this landmark book, Scott Page redefines the way we understand ourselves in relation to one another. The

Difference is about how we think in groups--and how our collective wisdom exceeds the sum of its parts. Why can teams of people find better solutions than brilliant individuals working alone? And why are the best group decisions and predictions those that draw upon the very qualities that make each of us unique? The answers lie in diversity--not what we look like outside, but what we look like within, our distinct tools and abilities. The Difference reveals that progress and innovation may depend less on lone thinkers with enormous IQs than on diverse people working together and capitalizing on their individuality. Page shows how groups that display a range of perspectives outperform groups of like-minded experts. Diversity yields superior outcomes, and Page proves it using his own cutting-edge research. Moving beyond the politics that cloud standard debates about diversity, he explains why difference beats out homogeneity, whether you're talking about citizens in a democracy or scientists in the laboratory. He examines practical ways to apply diversity's logic to a host of problems, and along the way offers fascinating and surprising examples, from the redesign of the Chicago "El" to the truth about where we store our ketchup. Page changes the way we understand diversity--how to harness its untapped potential, how to understand and avoid its traps, and how we can leverage our differences for the benefit of all.

**Changing Schools** Sep 30 2019 "The raising of standards in schools is a global challenge to policy-makers. To overcome it means to remove the ongoing influence of poverty on school success. In an age of global mobility, economic polarization and unprecedented environmental and cultural challenges, the education of all children and young people to higher levels has become a key issue of international policy. This book presents new thinking and practice for progressing school change today, drawn from the works of authors around the world. Educational policy-making has been dominated by particular human capital oriented theories of school improvement, formulated and implemented in neo-liberal political environments. This book seeks to challenge this dominance. It draws both on contemporary innovations in practice and theory and long standing traditions of alternative thinking and practice. Linking together and articulating other ways of conceiving of and implementing school change, it bases its findings on values of equality and global citizenship. It shows how schools can work to make different knowledges, languages, narratives, truths and ways of being integral to mainstream curriculum, pedagogy, assessment and school cultures and structures. The book is directed at all who are concerned with progressive school change and the promotion of democratic citizenship and social justice. This will include education students, those currently studying for school leadership positions, heads, teachers and policy-makers"--Provided by publisher.

**An Introduction to Statistical Methods and Data Analysis** Oct 04 2022 Ott and Longnecker's AN INTRODUCTION TO STATISTICAL METHODS AND DATA ANALYSIS, 6th Edition, International Edition provides a broad overview of statistical methods for advanced undergraduate and graduate students from a variety of disciplines who have little or no prior course work in statistics. The authors teach students to solve problems encountered in research projects, to make decisions based on data in general settings both within and beyond the university setting, and to become critical readers of statistical analyses in research papers and in news reports. The first eleven chapters present material typically covered in an introductory statistics course, as well as case studies and examples that are often encountered in undergraduate capstone courses. The remaining chapters cover regression modeling and design of experiments.

*Politics of Difference in Taiwan* Oct 12 2020 Taiwan has been hailed as a successful case of democratization. Compared with many other nations, the transition from authoritarian rule occurred in a rather orderly fashion. Group consciousness emerged as a reaction to the decades-long suppression of cultural diversity under martial law as different social groups competed fiercely to exert their political subjectivity. This volume is the first study to examine the politics of difference in Taiwan. It aims to go beyond ethnic identity as the sole concern for group boundary, to acknowledge the interests of other marginalized groups, and to look behind reified group boundaries in order to discover group differences as mediated social relations based on overlapping boundaries rather than exclusive opposition. In exploring the politics of difference among minority groups and the problems arising from their struggle over political recognition, the book challenges the assumptions that groups are ontologically given, that groups are internally homogenous, and that the particularistic identities have no overlap. The chapters offer a broad coverage of major social groups including ethnic minorities, recent migrants, gay and lesbian groups, and marginalized workers. They offer perspective analyses of the ongoing struggles by minority groups to overcome subordination. .

**Making the Difference** Dec 02 2019 First published in 1982, *Making the Difference* has become a classic in the study of education and of Australian society. Hailed on publication as 'certainly the most interesting book written about Australian schools in a very long time [and] arguably the most important', it has since been recognised as one of the 10 most influential works of Australian sociology, 'not just a major argument, and a 'classic' point of reference, [but] an event, an intervention in ways of doing research and speaking to practice, a methodology, a textual style. it was designed to be read by a much wider audience than the standard sociological text, and it has succeeded'. *Making the Difference* draws on a detailed study of the schools and homes of the powerful and the wealthy, and of ordinary wage-earners. It allows children, parents and teachers to speak for themselves and from what they say it develops strikingly new ways of understanding 'educational inequality', of how the class and gender systems work, and of schools and their social roles. 'Equality of opportunity', co-education, and 'relevant and meaningful curriculum' are all questioned, sympathetically but incisively. Ranging across educational policy from system level to the everyday experience of kids and teachers, from the problems of schooling to the production of class and gender relations, this path-breaking combination of theory, research and politics remains engaging, thought-provoking, and relevant.

Good Strategy/Bad Strategy May 19 2021 When Richard Rumelt's Good Strategy/Bad Strategy was published in 2011, it immediately struck a chord, calling out as bad strategy the mish-mash of pop culture, motivational slogans and business buzz speak so often and misleadingly masquerading as the real thing. Since then, his original and pragmatic ideas have won fans around the world and continue to help readers to recognise and avoid the elements of bad strategy and adopt good, action-oriented strategies that honestly acknowledge the challenges being faced and offer straightforward approaches to overcoming them. Strategy should not be equated with ambition, leadership, vision or planning; rather, it is coherent action backed by an argument. For Rumelt, the heart of good strategy is insight into the hidden power in any situation, and into an appropriate response - whether launching a new product, fighting a war or putting a man on the moon. Drawing on examples of the good and the bad from across all sectors and all ages, he shows how this insight can be cultivated with a wide variety of tools that lead to better thinking and better strategy, strategy that cuts through the hype and gets results.

Teamwork and the Bottom Line Sep 10 2020 This volume is based on extensive research findings and the author's observation that successful managers are people who understand the dynamics of group interaction and can use that understanding effectively to motivate members of their group to achieve important goals. Blending theory, research, and practice, the book emphasizes a "management through teamwork" strategy in task groups that increases both the quality and quantity of goods and services, improves decision making, and is beneficial to their members. While closely linked to a large body of applied research evidence, Teamwork and the Bottom Line makes liberal use of examples drawn from business oriented publications and from the author's experiences in manufacturing, service, sales, information systems, health care, and other work environments. It includes numerous ideas that can help managers become more secure in their current roles by developing a more complete knowledge base about potential "change levers."

treatment for atherosclerotic cardiovascular disease. In this newly revised and extensively updated edition of what has come to be regarded as the definitive textbook on the subject, renowned chelation expert Elmer M. Cranton, M.D., presents the work of the world's leading experts in chelation therapy. "This therapy has been proven effective over and over again in clinical practice," says Dr. Cranton. "More than one million patients have received more than twenty million infusions with no serious or lasting adverse effects." In his foreword, Nobel Prize winner Dr. Linus Pauling states, "EDTA chelation therapy makes good sense to me as a chemist and medical researcher. It has a rational scientific basis, and the evidence for clinical benefit seems to be quite strong." Here in a single volume you will learn everything you need to know to responsibly administer and advocate chelation therapy. You will find a coherent scientific rationale, clinical trials demonstrating effectiveness, guidelines for safety, detailed protocols for administration, and techniques for pre- and post-treatment laboratory evaluation.

**Making a Difference in Education** Jan 27 2022 What is working in education in the UK - and what isn't? This book offers a highly readable guide to what the latest research says about improving young people's outcomes in pre-school, primary and secondary education. Never has this issue been more topical as the UK attempts to compete in the global economy against countries with increasingly educated and skilled work-forces. The book discusses whether education policy has really been guided by the evidence, and explores why the failings of Britain's educational system have been so resistant to change, as well as the success stories that have emerged. Making a Difference in Education looks at schooling from early years to age 16 and entry into Further Education, with a special focus on literacy, numeracy and IT. Reviewing a large body of research, and paying particular attention to findings which are strong enough to guide policy, the authors examine teacher performance, school quality and accountability, and the problematically large social gap that still exists in state school education today. Each chapter concludes with a summary of key findings and key policy requirements. As a comprehensive research review, Making a Difference in Education should be essential reading for faculty and students in education and social policy, and of great interest to teachers and indeed to anyone who wants to know about the effectiveness of UK education policy and practice, and where they should be going.

*Individual Differences and Personality* Jul 21 2021 How do we come to be who we are? Why do we differ in our personalities? How do these differences matter in life? *Individual Differences and Personality* aims to describe how and why personality varies among people. Unlike books that focus on individual theorists, this book focuses on current research and theory on the nature of personality and related individual differences. The book begins by discussing how personality is measured, the concept of a personality trait, and the basic dimensions of personality. This leads to a discussion of the origins of personality, with descriptions of its developmental course, its biological causes, its genetic and environmental influences, and its evolutionary function. The concept of a personality disorder is then described, followed by a discussion of the influence of personality on life outcomes in relationships, work, and health. Finally, the book examines the important differences between individuals in the realms of mental abilities, of beliefs and attitudes, and of behavior. Presents a scientific approach to personality and related individual differences, as well as theory and research on the fundamental questions about human psychological variation New edition presents findings from dozens of new research studies of the past six years Includes new chapter on vocational interests and a revised chapter on personality disorders reflecting DSM-5 formulation Contains streamlined descriptions of measurement concepts and heritability research Includes various boxes containing interesting asides that help to maintain the student's attention.
